FORGED WHEEL COLLECTION

**MADE IN THE USA** Vellano Forged Wheels® are custom made in Ontario, California. We design, CNC machine, and assemble our wheels entirely in house. This allows us to work closely with our clients and offer applications that are truly tailor made, with maximum quality control, in a minimum amount of time.

**DESIGN** We design our wheels specifically for the finest automobiles on the road today. Some of our designs lean more towards providing the ultimate in luxury appearance, while others are optimized for racing performance. Our in house design team is continually working on creating new and trendsetting designs.

**MANUFACTURING** We take great pride in the fact that we CNC machine our wheels ourselves. We have been manufacturing precision CNC machined racing and performance parts for the automotive industry for 15 years, and we have contracted precision components to the aircraft industry. At this time we have focused our energies exclusively on building the highest quality aftermarket wheels in the industry.

**SPECIFICATIONS** All of our centers are forged and CNC machined—not cast. All wheels feature multi-piece construction. We have several different options available for TPMS compliance, please visit our website for details.

**MATERIALS** We use only aerospace grade 6061 T6 heat treated aluminum for the centers, non-corrosive stainless steel nuts & bolts for assembly, and CNC'd billet aluminum for our center cap.

**TESTING** First, our in house engineering department uses CAD/CAM software to conduct computer simulated failure testing on each new wheel design. Then, a wheel prototype is sent to an independent lab where it is tested for fatigue, impact, and cornering according to the SAE J2530 specifications. Finally, we conduct a run out test in order to insure that every wheel we produce is within spec before leaving our factory.

**FINISHES / SIZES** Our standard finishes are machine brushed (diamond cut), chrome, and painted (single-tone). Many custom finish options are available. We currently offer 19, 20, 21, 22, 24, 26 & 28 inch diameter wheels in a variety of widths. In most cases lip sizes are maximized, unless requested otherwise. All of our wheels are custom sized to each application with lips up to 10”.

**APPLICATIONS** We specialize in Wheels for Aston Martin®, Audi®, Bentley®, BMW®, Cadillac® Ferrari®, Jaguar®, Lamborghini®, Land Rover®, Maserati®, Maybach®, Mercedes-Benz®, Porsche®, and Rolls-Royce®. We do not make applications for every car on the road. If you would like to know if we manufacture for a particular car make and model, please give us a call.

**CUSTOM OPTIONS** We offer custom engraving, and special finish options. Please contact your sales rep for details.

Care & Maintenance

All Wheels: The following information applies to all wheels. Always wash your car in the shade. It is better for every part of your car's exterior including paint, rubber/plastic trim, and wheels. Direct sunlight will dry soap and water before you've had a chance to rinse it and wipe it dry. It is very important to allow wheels to cool completely before cleaning. Spraying any type of cleaner on a hot wheel can harm the finish. We do not recommend running water on your wheels to cool them. It is best to clean your wheels one at a time. Do not allow water or cleaners to dry on the wheel. Hard water will leave spots which can be very difficult to remove. If you are using conditioned water (soft, deionized), then it is ok to let your wheels air dry, but first make sure they are thoroughly rinsed to remove any soap or cleaning product. If wheels are cleaned regularly, it is usually not necessary to use a specific wheel cleaning spray. A separate car wash mitt with regular car wash soap is gentle on your wheels, and should be adequate to remove weekly dirt, and brake dust build up. After washing, thoroughly rinse the wheel in order to remove all soap. Again, do not allow the wheel to dry on it's own as you will be left with hard water spots. Many wheel cleaning products can be very harsh as well as bad for the environment. However, if simple car wash soap is not enough to clean your wheels, then you may require a specific wheel cleaner. Be sure to only use wheel cleaners that are recommended for use on aftermarket finishes. Regular car wax is a great way to prolong the finish and enhance the appearance of all of our wheel finishes. Chrome Wheels: The additional information applies specifically to chrome wheels. Avoid any type of chrome or metal polish, that feels gritty or abrasive. The cotton wadding type is generally the best as it uses solvent rather than abrasives to remove oxidation. Painted / brushed / polished: The additional information applies specifically to painted, brushed, and polished wheels. Brushed and polished wheels have a clear coat, which is in fact, paint. These wheels should be cared for exactly like paint. Do not use any type of metal polish on a brushed or polished wheel. After cleaning you can use a paint polish, and wax to enhance appearance, but stay away from harsh rubbing compounds as they will dull the finish, and could wear through the clear coat.

Warranty

We stand behind our products. All of our wheels are backed by a warranty in order to insure the highest quality and consumer satisfaction. Please see our website for the complete warranty information.

**WORLDWIDE** Vellano Forged Wheels® is an international business and we welcome inquiries from around the world. In addition to the US, we currently have resellers in the following countries: Australia, Bahrain, Belgium, Brazil, Canada, China, Dominican Republic, Dubai, Germany, Hong Kong, Indonesia, Japan, Scotland, Thailand, United Kingdom.
